

CA Wily Introscope® PowerPacks and Extensions Now Included as Part of Introscope

CA WILY INTROSCOPE COMPONENT	BENEFITS
EXTENSIONS	
ErrorDetector	Detect and diagnose the cause of serious errors, which can prevent end users from completing web transactions.
ChangeDetector	Detect and diagnose change-related web application performance issues.
LeakHunter	Identify application memory leaks that cause performance degradation, unpredictable execution or application crashes.
Environment Performance Agent	Consolidate a variety of performance metrics for any non-Java application or application component to monitor virtually any type of application subsystem.
APPLICATION SERVER PORTAL AND PLATFORM SUPPORT	
PowerPack for IBM WAS for Distributed Environments	Optimize Websphere performance.
PowerPack for BEA WebLogic Server	Optimize WebLogic performance.
Introscope for Microsoft .NET	Monitor .NET-based web applications in production, detect problems before they affect users and resolve these issues quickly and collaboratively.
Introscope for SAP NetWeaver	Manage the availability and performance of their Java-based production NetWeaver applications.
Portal Manager for BEA WebLogic Portal	Monitor the entire portal framework 24x7 to identify performance problems within the portal and connections to back-end systems.
Portal Manager for IBM WebSphere Portal	Monitor the entire portal framework 24x7 to identify performance problems within the portal and connections to back-end systems.
ADDITIONAL POWERPACKS	
PowerPack for IBM CICS Transaction Gateway	Monitor CICS transactions and verify CICS service levels.
PowerPack for IBM Websphere MQ Connectors and Messaging System	Manage WebSphere MQ messaging and connection performance.
PowerPack for Oracle Database	Monitor the availability and performance of Oracle databases.
PowerPack for Web Servers	Manage the availability and performance of leading web servers such as Apache, Microsoft® IIS, IBM® HTTP Server and iPlanet™.
PowerPack for CA SiteMinder Web Access Manager	Monitor CA SiteMinder Web Access Manager transactions and correlate them with web application performance in real time.
Web Services Manager	Manage the performance and availability of critical Web Services.
